

RAAVE'S EVERGREEN ONLINE STORE PROPOSAL

Website · E-Commerce · Admin Dashboard

Prepared for · Raave's Evergreen — Egmore, Chennai
Prepared by · MAARR SMART

DRAFT · STRICTLY CONFIDENTIAL

01 EXECUTIVE SUMMARY

MAARR SMART proposes a connected e-commerce platform for Raave's Evergreen: a premium storefront where customers shop and pay online, with every order automatically routed to the nearest branch — and every payment settled to that branch's own account through Razorpay.

The Platform Will

- ▶ Sell the Raave's Evergreen collection online through a cinematic, mobile-first storefront
- ▶ Route each order to the nearest branch that can fulfil it, and alert that branch instantly
- ▶ Send each Razorpay payment only to the fulfilling branch's account — no manual transfers from HQ
- ▶ Let trade buyers register as vendors and, once approved by HQ, buy at higher discounts
- ▶ Let vendors send their cart to the branch on WhatsApp instead of paying online, where the order is settled offline
- ▶ Give HQ one dashboard across all branches, while each branch sees only its own orders

This proposal covers **Phase 1**. Future capabilities are listed in Section 11 and are not included in the scope or pricing.

02 PROPOSED PLATFORM STRUCTURE

Five modules on one shared data layer, unified by a single HQ dashboard.

INTEGRATED HQ ADMIN DASHBOARD		
▶ Sales across all branches	▶ Branch-wise order status	▶ Razorpay settlements
▶ Vendor approvals	▶ Branch stock & alerts	▶ Products, pricing & users

branch managers get the same dashboard, restricted to their own branch

Storefront & Checkout	Branch Routing	Branch Payments	Vendors
▶ Cinematic Landing Page	▶ Pincode / GPS Lookup	▶ Single Razorpay	▶ Registration
▶ Catalogue & Cart	▶ Nearest-Branch Match	▶ Auto-Transfer	▶ HQ Approval
▶ OTP Sign-In	▶ Stock Fallback	▶ Hold Until Accepted	▶ Vendor Tiers
▶ Razorpay Checkout	▶ Branch Alerts	▶ Refunds	▶ Trade Discounts
▶ Order Tracking	▶ HQ Reassignment	▶ Settlements	▶ WhatsApp Cart

03 MODULE 1 — STOREFRONT & CHECKOUT

The approved Raave's Evergreen landing page — parallax hero, snowfall, spruce green and champagne gold — becomes the front of a working store.

#	MODULE	CAPABILITIES
01	Landing Page	Cinematic hero, category grid, best sellers, brand story, blog, and branch locator — built from the approved design with real product photography.
02	Catalogue & Cart	Products with variants (size, colour, finish), search and filters, cart, wishlist, and coupon codes.
03	Mobile OTP Sign-In	Password-free sign-in with saved addresses and order history.
04	Delivery or Store Pickup	Customer enters a pincode or picks a store; the serving branch is shown before payment.
05	GST Invoicing	Invoice issued automatically under the fulfilling branch's GSTIN.
06	Order Tracking	Confirmed → Packed → Dispatched / Ready → Delivered, with WhatsApp, SMS, and email updates.
07	Send Cart on WhatsApp	An optional "Order on WhatsApp" button on the cart, which HQ can switch on for vendors only, for everyone, or off.

04 MODULE 2 — NEAREST-BRANCH ORDER ROUTING

The branch is decided before payment is taken — because the branch decides whose account is paid.

#	MODULE	CAPABILITIES
01	Nearest-Branch Matching	Pincode or GPS is geocoded and matched to the nearest active branch within its service radius.
02	Pincode Overrides	HQ can hard-map pincodes to a specific branch, overriding distance.
03	Stock-Aware Fallback	If the nearest branch can't fulfil the full cart, the next nearest branch is tried automatically.
04	Instant Branch Alerts	On payment, the branch is alerted via WhatsApp, SMS, and a dashboard chime.
05	SLA & Reassignment	Orders not accepted within a set window escalate to HQ, who can reassign them to another branch.

Order Routing Flow

Figure 1 — From delivery location to a locked branch, a branch-bound payment, and an accepted order.

05 MODULE 3 — BRANCH-DIRECT PAYMENTS (RAZORPAY)

All payments run through a single Raave's Evergreen Razorpay account using Razorpay Route. Each branch is added as a Linked Account with its own bank account, and the fulfilling branch is attached to the Razorpay order before the customer pays — so the money for an order goes only to that branch.

#	MODULE	CAPABILITIES
01	Razorpay Checkout	UPI, cards, net banking, and wallets through Razorpay's hosted checkout.
02	Branch Linked Accounts	Every branch is set up once under the main Razorpay account with its own KYC and bank details.
03	Branch-Bound Transfers	Funds move automatically to the resolved branch's account on capture — no manual step at HQ.
04	Hold Until Accepted	Optional: funds are released to the branch only after it accepts the order.
05	Refunds & Reversals	Cancellations reverse the branch transfer and refund the customer, logged against the order.
06	Settlement Tracking	Per-branch payments, transfers, and settlements, matched to orders and exportable.
07	Offline / WhatsApp Orders	Carts sent to a branch on WhatsApp skip online payment entirely; the branch records how it was settled, so reports stay complete.

Payment Sequence

Figure 2 — The branch is bound to the order before payment; the transfer happens automatically on capture.

Each branch must complete Razorpay KYC as a Linked Account before it can receive funds, so branch onboarding starts in week one.

06 MODULE 4 — VENDOR REGISTRATION & TRADE PRICING

A trade channel for decorators, event planners, hotels, and retailers. Vendor pricing is visible only to HQ-approved accounts.

#	MODULE	CAPABILITIES
01	Vendor Registration	Business name, GSTIN, contact, and GST certificate upload, with OTP and email verification.
02	HQ Approval	Approve, reject with reason, or request more information — vendor notified at each step.
03	Vendor Tiers & Discounts	Approved vendors get a tier with higher discounts, plus minimum order rules, all set by HQ.
04	Vendor Orders	Vendor orders use the same nearest-branch routing as retail, and can be paid online or sent to the branch on WhatsApp.
05	Send Cart on WhatsApp	Instead of paying online, a vendor sends the full cart — items, quantities, vendor prices, and GST — as a formatted WhatsApp message to the nearest branch, which confirms the order and settles payment offline.
06	WhatsApp Orders in the Dashboard	WhatsApp enquiries are logged as orders against the branch and vendor with an Enquiry status, so HQ still sees them in sales and branch reports.

Vendor Approval Flow

Figure 3 — Application, HQ decision, and tier assignment.

07 MODULE 5 — ADMIN & BRANCH DASHBOARDS

One platform, two views: HQ sees every branch; each branch sees only its own orders.

#	MODULE	CAPABILITIES
01	HQ Overview	Live sales, orders, and branch performance, filterable by branch, city, date, and retail / vendor.
02	Orders & Payments	Every order with its branch, payment, transfer, and status; reassign, cancel, or refund.
03	Products, Stock & Vendors	Manage products and prices, per-branch stock with low-stock alerts, and the vendor approval queue.
04	Branch Dashboard	Branch staff accept, pack, and dispatch their own orders and update their own stock.
05	Roles, Audit & Reports	Role-based access, an audit log of sensitive actions, and Excel / PDF reports.

08 END-TO-END DATA FLOW

One Order, End to End

Figure 4 — How one paid order updates payments, stock, invoicing, notifications, and the HQ dashboard.

09 IMPLEMENTATION ROADMAP

#	STAGE	SCOPE
Stage 1	Storefront Build	Landing page, catalogue, cart, sign-in, checkout.
Stage 2	Routing & Payments	Nearest-branch engine, Razorpay branch transfers, invoicing, alerts.
Stage 3	Vendors & Dashboards	Vendor registration and tiers, HQ and branch dashboards.
Stage 4	Testing & Launch	End-to-end testing with live test payments to each branch, training, go-live.
Parallel	Razorpay & Branch Onboarding	Razorpay activation and branch KYC run alongside Stages 1–2.

Estimated Duration: 6 weeks from project kickoff.

10 COMMERCIAL MODEL

Fixed fee for **Phase 1** (Sections 03–07), released against milestones.

PHASE 1 — ITEM	DETAIL
Estimated Duration	6 weeks
Scope	Landing page, storefront & checkout, branch routing, Razorpay branch payments, vendor module, admin & branch dashboards
Total Project Investment (Phase 1)	₹ 3,25,000 (Rupees Three Lakhs Twenty-Five Thousand only)
Payment Milestones	50% (₹1,62,500) on kickoff · 30% (₹97,500) at mid-build · 20% (₹65,000) on launch

Third-Party Costs (billed directly to Raave's Evergreen, not included above)

ITEM	BASIS
Cloud hosting & domain / SSL	Monthly / annual, usage-based
Razorpay gateway & Route charges	Per transaction, as set at Razorpay onboarding
SMS / OTP & WhatsApp Business API	Per message / conversation
Maps & geocoding API	Per lookup at checkout

Product photography and catalogue content are supplied by Raave's Evergreen. Branch KYC is completed with Razorpay directly; MAARR SMART handles the technical integration. Last-mile delivery is handled by branches in Phase 1. Anything beyond this scope is quoted separately.

11 FUTURE PHASES (NOT IN SCOPE)

- **Delivery partners** — courier / hyperlocal booking with live tracking
- **Split fulfilment** — one cart served by two branches, payment split between them
- **POS stock sync** — real-time branch stock from in-store billing
- **Engagement** — abandoned-cart reminders, loyalty points, reviews
- **Vendor credit & quotations** — pay-later terms and bulk quote requests
- **Mobile apps & AR preview** — see a tree to scale in your room before buying

12 NEXT STEPS

#	ACTION	DETAIL
01	Commercial Sign-off	Agree scope, timeline, and terms.
02	Branch & Razorpay Setup	Share branch list with addresses, GSTINs, and bank details; start branch KYC on Razorpay.
03	Development Kick-off	Begin build with weekly progress updates.

MAARR SMART looks forward to taking Raave's Evergreen online — and routing every festive order to the branch closest to home.
